

Elie Lobel

CEO

Orange Healthcare

Elie Lobel is the CEO of Orange Healthcare. As the digital healthcare subsidiary of Orange Business Services, Orange Healthcare's mission is to develop e-health activities in France and internationally by leveraging the Orange group's vast expertise in Information and Communication Technologies.

Prior to joining Orange, Elie was Director of the National e-Health Projects division at ASIP Santé, a governmental agency responsible for promoting the deployment of e-health across France. During this period and through his responsibilities, Elie gained significant insight and solid knowledge of the various public policy issues relating to e-health.

Elie holds degrees in engineering from the Ecole Centrale Paris and Cornell University (USA) and a PhD in Neuroimaging. Throughout his career, he has consistently focused on the healthcare sector, with a particular emphasis on medical IT, e-health and medical imaging. He has significant experience in the start-up sphere, having contributed to the success of a number of innovative start-ups specialized in healthcare information systems and software-based medical diagnostics tools.

Elie speaks frequently at conferences in France and internationally on the impact of new technologies on healthcare systems.

Orange Healthcare, new Orange technology for healthcare services

For more than a decade, Orange has gained substantial experience in providing integrated and customer-centred technology solutions for health professionals, health providers and patients. This has been done through close collaboration with health professionals and providers – ensuring that the technology brings improved quality and efficiency for all. In 2007 Orange signalled its commitment to the health sector with the creation of Orange Healthcare, to explore the digital healthcare market, and transformed in April 2016 into a strategic subsidiary of Orange Business Services.

On the strength of its position as an integrated services operator, Orange has technological know-how to be able to develop solutions which are not only simple, reliable and effective for medical and personal care services, but which also contribute to bringing innovation to patients and an enhanced experience in managing their health and illnesses.

New technologies will play an essential role in the modernisation and improvement of health care, in the hospital, local clinics and surgeries and in the home. Orange can provide the technology to meet the needs of all stakeholders in the health sector – professionals, managers and IT administrators, patients and public and private health providers. Orange has unrivalled access to the resources of the Orange group with leading edge R&D as well as unparalleled commitment to wellness, e-health and improving efficiency and return on e-health technology investment.
