

## **“Liberating the Data: when Big-Data and Innovation Meet”**

**Ziv Ofek, Founder & CEO, MDClone**

Lecture: Healthcare data is abundant but accessing, connecting and sharing healthcare data is time consuming, resource intensive and risky, leading to limited utilization and security vulnerabilities. Existing solutions to make healthcare data available for analysis and research either limit insights to pre-defined questions or require heavy lifts from IT experts. Protection of patient privacy relies on de-identification techniques which all leave some risk of patient re-identification. The lecture will present a new paradigm for data liberation, where any question can be asked by any user across the healthcare ecosystem with zero-time to data and insights and zero-risk to patient privacy.
