

## [430] XACT ROBOTICS - XACTLY ON TARGET EVERY TIME

Chen Levin, CEO, XACT Robotics Ltd, Caesarea, Israel

- **Investment Rational**  
XACT develops a truly transformational technology – the first robotic system that combines navigation with steering and insertion capabilities for soft-tissue image-guided interventional percutaneous procedures. The XACT system utilizes its robot to deliver any surgical and/or procedural instrument to the desired anatomical target accurately, consistently, and in one shot, allowing more physicians to treat more patients by democratizing interventional procedures.
  
- **Product Profile/Pipeline**  
XACT has already obtained CE Certification, which allows it to commercialize its robotic system for use with CT in Europe, and established active Centers of Excellence for clinical trials in the USA and in Israel.
  
- **What's Next?**  
XACT continues to develop its robotic platform for use with additional imaging modalities and additional indications, including a collaboration with the United States National Institute of Health. Additional Centers of Excellence will be established in Europe, USA, Canada and Israel by the end of 2019 leading to a full product launch in Q1 2020.
