- Digital Biomarkers & Digital Pathology: new tools to enhance therapy

**Title of Abstract:** Revolutionizing first line hematology testing with Full Field technology

Scpio Labs is the developer of full-field digital imaging for hematology diagnostics, solving cell morphology's age-old trade-off between resolution and field of view. High-resolution imaging combined with embedded AI for cell analysis creates a standardized clinical output and more efficient remote workflow, contributing to better diagnostics. The Full-Field Peripheral Blood Smear Application and Full-Field Bone Marrow Aspirate Application are FDA-cleared and CE-marked and commercially available, creating positive impact in hospitals and laboratories around the world. Scpio Labs is on a journey to capture the untapped diagnostic potential of the morphological phenotype - making anecdotal findings into reliable and actionable biomarkers directly from blood, from infectious diseases to hematological malignancy indications and beyond.
