(Delete sessions you are not selecting)

- War-Time Innovation, Peace-Time Solutions; Harnessing Crisis-Driven Breakthroughs for the Future of Medicine

You may delete the section instructions, leaving only the bolded bullet title
Answers below should not exceed 60 words per question:

- Executive Summary

Tengable is focused on restoring the sense of touch to those who lost it. We aim to serve hundreds of millions of global patients suffering from finger injuries, burns, and diabetic neuropathy and represent a market of tens of billions annually. Investments - \$1.7M so far, closing on an additional \$2.75M.

- Core Technology

Our implantable device is based on a powerless pressure sensor that converts the energy of the touch to an electric charge, which we carry to a healthy nerve. There is no other solution for sensory restoration. We can manufacture it cheaply and open a new healthcare market.

- Product Profile/Pipeline

Our first product, an ankle sensor prototype, is nearing the animal and human trials phase, both launched this year. It will be followed by a finger product (1M new patients annually) and a diabetic neuropathy solution (hundreds of millions). We are collaborating with CortecNeuro in R&D and manufacturing.

- Business Strategy

Tengable will send its products through distributors. Over time, we will have solutions for a growing number of indications. We also expect to collaborate with companies specializing in motion to create comprehensive solutions.
