

Tuvik Beker, PhD

Tuvik Beker is the CEO of Pangea Biomed, a clinical stage computational oncology company developing AI-driven predictive biomarkers for drug response and resistance. Pangea developed ENLIGHT - the world's most advanced pan-cancer, pan-treatment prediction platform for oncology, which uses transcriptomics and digital pathology to optimize care management and drug development.

Dr. Beker is a serial entrepreneur with rich experience in Machine Learning and Computational Biology. For more than 20 years, he has built and led AI-based companies in a variety of domains, with special focus on the healthcare and life sciences industry. In addition to leading Pangea Biomed, Tuvik is also a director in MedAware - a leading provider of AI-based patient safety solutions, which he co-founded. Tuvik is passionate about bringing computational biology and digital health solutions to the point of care, and loves to discuss the challenges associated with this effort at the technological, ethical and practical levels.
