

Prof. Vered Padler-Karavani is Head of the Laboratory for Glycoimmunology at Tel Aviv University, Treasurer and Vice President of the Israel Immunological Society and a Senior Member of the National Academy of Inventors. She received her BSc, MSc, and PhD in Biochemistry from Tel Aviv University, followed by postdoctoral training at UC San Diego. Her laboratory investigates molecular mechanisms of glycan-immune interactions from fundamental discovery to human translational studies, with the objective of developing innovative diagnostics and therapeutics for chronic inflammation and cancer. Her multidisciplinary program integrates glycobiology, immunology, bio-nanotechnology, bioinformatics, and clinical research, and has led to the development of glyco-engineered diagnostics and immunotherapies, including anti-glycan antibodies, CAR-T strategies and cancer vaccine targeting tumor-associated carbohydrate antigens.
