Patients are Consumers at Home – How Far Can They Manage Their Health?

Executive Summary

Datos Health is a Design Studio for automated remote care programs. The platform simplifies how patients and clinicians navigate complex care delivery programs in the hybrid care era. We have supported over 1M patients and over 8K clinicians with our 200 different CareApps in leading organizations to reduce clinician workload and improve outcomes.

Core Technology

Our drag-and-drop Design Studio allows for quick and easy deployment of automated interactive remote care plans (CareApps) that can be adjusted as needed without the need for developers. Our H-RPA (healthcare robotic process automation) engine automates many parts of a workflow across clinical domains for both patients and clinicians to reduce alert fatigue. All device, survey, EMR, and other external data is analyzed to turn raw patient data into clinician utility.

- **Product Profile**

Datos Health is utilized across the globe at leading healthcare organizations and pharmaceutical companies. The platform has supported 1M patients and over 8K clinicians and was developed through strategic partnerships with marquee organizations.

- **Business Strategy**

Datos Health is a SaaS platform that charges per patient/per month. We have secured multi-year contracts with our enterprise clients such as health systems, academic medical centers, research institutes, and pharmaceutical companies.

What's Next?

Our technology roadmap includes the introduction of AI into patient/clinician workflow management.

1. Main Service

Our remote care programs are implemented across all clinical domains, for any level of acuity. We already have over 200 different patient CareApps spanning specialty care, home hospitalization, primary care, the transition of care, and hospital at home.

2. Key Strengths

The Datos Health platform enables an automated assisted self-care approach to encourage patients to actively participate in their care journey and reduce clinician workload.

3. Experience with Israeli Companies

Datos Health is deployed across the state of Israel including all hospital systems and HMOs. Sheba Medical Center, which has over 50 remote care programs with Datos Health is both our client and partner, we work with the Ministry of Health in Israel which includes 24 hospitals and Clalit, Maccabi, and Assuta, and more. We also have partnerships with TytoCare, Biobeat, Binah.ai, Essence, and Oxitone.

Key Markets

Our platform already has a global presence and is most relevant for health systems, academic medical centers, research institutes, and pharmaceutical companies.
